## PROVISIONAL SPECIFICATION.

## A New Form of Sweetmeat.

We, SYDNEY MALCOLM WHITE, a British Subject, and WHITE, HUDSON & COMPANY LIMITED, a British Company, both of Globe Works, Shakespeare Street, Southport, do hereby declare the nature of this invention to be as follows:—

This invention relates to a new form of sweetmeat made of sugar confectionery or what is generally known in the trade as "rock".

According to this invention the sugar rock is made up in a form to represent a cucumber and with this object one end part of the length of rock is formed as a restricted lobe the normal diameter of of the length of rock being reduced at the end for this purpose. The ends of the length of rock are also slightly rounded to simulate the rounded ends of a natural cucumber and the exterior of the whole length of rock is covered with a layer of sugar coloured dark green, this ex-

terior coloured sugar coating being preferably striated or arranged with bands of slightly varying tint as in a natural cucumber. The interior of the rock is made of white sugar and in order to imitate the longitudinal ovary cells of a natural cucumber the interior of the rock is formed with a series of longitudinally disposed portions of clear sugar, the cross sectional formation of which is made somewhat in the shape of the ovary cells of a natural cucumber. In this way when the stick or rock is broken the cross sectional appearance is very similar to a cucumber when cut. The length of rock may be given a slight longitudinal curvature further to simulate the appearance of a natural cucumber.

Dated this 31st day of December, 1930.

## COMPLETE SPECIFICATION.

## A New Form of Sweetmeat.

We, SYDNEY MALCOLM WHITE, a British Subject, and WHITE, HUDSON & COMPANY LIMITED, a British Company, both of Globe Works, Shakespeare Street, Southport, do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:—

This invention relates to a new form of sweetmeat made of sugar confectionery or what is generally known in the trade as "rock" and has for its object to produce a new effect both as regards its appearance and as an edible product. The invention particularly relates to sweetmeats of the type made in the form of fruits, such for instance as a banana, the interior being of white pulled sugar with a central core or letters or a design of clear sugar and having an outer finish representing the outer skin of the fruit.

According to this invention the sweetmeat is made of sugar rock in the shape [Price 1/-]

of a natural cucumber that is having a definite lobe of reduced diameter at one end only, the interior being of white sugar within which is embedded a series of longitudinally disposed parts of clear sugar, and the whole exterior being covered with a layer of dark green coloured sugar longitudinally striated.

A sweetmeat in accordance with this invention is illustrated in the accompanying drawings in which Fig. 1 is an elevation and Fig. 2 a cross section.

The sweetmeat is made of a length of sugar rock and somewhat of the form shown to imitate the shape of a natural cucumber. One end 1 of the stick of rock has a restricted lobe, being of smaller diameter than the remainder. Both extreme ends 2 of the length of rock are slightly rounded, the exterior of the whole stick of rock being covered with an outer layer 3 of dark green coloured sugar. This outer green coloured layer 3 extends also over the ends 2 completely enclosing

*Banana*

an interior core 4 of white coloured sugar. The exterior layer 3 is striated as indicated at 5 and the tinting of this outer green layer may be varied in tone. The interior 4 of the stick of rock has a series of longitudinally disposed portions 6 of clear sugar arranged within it, the cross sectional formation of these clear sugar portions being somewhat in the shape shown to simulate the ovary cells of a natural cucumber.

The whole length of the stick of rock is preferably given a slight longitudinal curvature as in a natural cucumber.

Having now particularly described and ascertained the nature of our said invention and in what manner the same is to be performed, we declare that what we claim is:—

1. A sweetmeat made of sugar rock in the shape of a natural cucumber that is having a definite lobe of reduced diameter at one end only, the interior being of white sugar within which is embedded a series of longitudinally disposed parts of clear sugar, and the whole exterior being covered with a layer of dark green coloured sugar longitudinally striated.

2. A sweetmeat made of sugar rock in a form to represent a natural cucumber substantially as described and shown in the accompanying drawings.

Dated this 25th day of September, 1931.
